

baculoFECTIN™

the new transfection reagent,
especially for Insect Cells

- **RELIABLE**—Tried, tested and regularly used in-house by our baculovirus experts
- **EFFICIENT**—Our tests show reproducibly higher levels of transfection in insect cells to facilitate high level protein expression
- **SIMPLE**— Quick and easy protocol, from co-transfection to high titre seed stock!
- **CELL-FRIENDLY**—non-toxic to cells
- **INNOVATIVE**— Nanoparticle/ polymer duplex optimises entry into the cells and stabilises the DNA within transfected insect cells

Titre of recombinant virus produced after co-transfection, $\times 10^7$ pfu/ml

Now available in 150 µl and 1 ml volumes

baculoFECTIN is the ideal companion to our world beating **flashBAC** baculovirus expression system and is routinely used by our scientists in conjunction with **flashBAC**. So if you would like to improve your transfection efficiency by upgrading to a transfection reagent that is optimised for use in insect cells and regularly used by world leading experts, contact Oxford Expression Technologies today!
